

# Desert Animals Types

The desert is home to many types of animals.  
Desert animals have adapted to survive in harsh, dry conditions.

# CLASSIFICATION OF ANIMALS

Types of animals that can be found in deserts include mammals, birds, reptiles, and amphibians.

Mammals are animals that have warm blood, hair or fur, and give birth to live young.

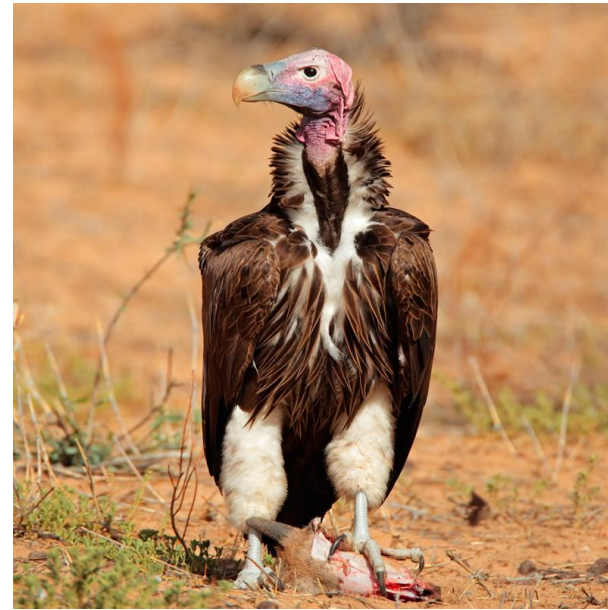

Mammals in the desert include bobcats, coyotes, jack rabbits, and mountain lions.

Birds are animals characterized by their feathers, beaked jaws, four-chambered heart, and for laying hard-shelled eggs.

Birds found in the desert include hawks, hummingbirds, owls, and vultures.

Reptiles are cold-blooded animals that breathe air, have scales, and lay hard-shelled eggs.

Reptiles that can be found in the desert include rattlesnakes, tortoises, iguanas, and lizards.

Amphibians are cold-blooded animals that have gills and live in water but also breathe air.

Amphibians found in the desert include frogs and toads.

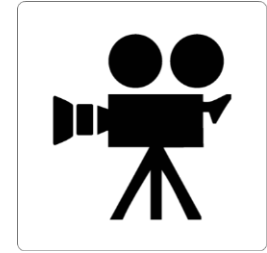

Many animals live in the desert.

Animals can learn to live and thrive in the harsh desert environment.
